Section 1 : Coding

1. Problem Statement

Siri is a computer science student who loves solving mathematical problems. She recently learned about infix and postfix expressions and was fascinated by how they can be used to evaluate mathematical expressions.

She decided to write a program to convert an infix expression with operators to its postfix form. Help Siri in writing the program.

Input Format

The input consists of a single line containing an infix expression.

Output Format

The output prints a single line containing the postfix expression equivalent to the

given infix expression.

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: (2 + 3) * 4

Output: 23+4*

Answer

```
// You are using GCC
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <ctype.h>
char stack[30];
int top=-1;
void Push(char x){
    if(top>50)
        exit(1);
    else
        stack[++top]=x;
}
char Pop(){
    if(top==--1)
        exit(1);
    else
        return stack[top--];
}
int precedence(char x){
    if(x=='('||x=='')
        return 0;
    else if(x=='+'|| x=='-')
        return 1;
    else if(x=='*'||x=='/')
        return 2;
    else if(x=='^')
        return 3;
    else
        return -1;
```

```

}
int main(){
    char exp1[30],*e,x;
    scanf("%s",exp1);
    e=exp1;
    while(*e!='\0'){
        if(isalnum(*e))
            printf("%c",*e);
        else if(*e=='(')
            Push(*e);
        else if(*e==')'){
            while((x=Pop())!='(')
                printf("%c",x);
        }
        else if(isspace(*e)){
            e++;
            continue;
        }
        else{
            while(precedence(stack[top])>=precedence(*e))
                printf("%c",Pop());
            Push(*e);
        }
        e++;
    }
    while(top!=-1){
        printf("%c",Pop());
    }
    return 0;
}

```

Status : Correct

Marks : 10/10

2. Problem Statement

In an educational setting, Professor Smith tasks Computer Science students with designing an algorithm to evaluate postfix expressions efficiently, fostering problem-solving skills and understanding of stack-based computations.

The program prompts users to input a postfix expression, evaluates it, and displays the result, aiding students in honing their coding abilities.

Input Format

The input consists of the postfix mathematical expression.

The expression will contain real numbers and mathematical operators (+, -, *, /), without any space.

Output Format

The output prints the result of evaluating the given postfix expression.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 82/

Output: 4

Answer

```
// You are using GCC
#include<stdio.h>
#include<stdlib.h>
#include<string.h>
#include<ctype.h>
int stack[50];
int top=-1;
void Push(int x){
    stack[++top]=x;
}
int Pop(){
    if(top== -1)
        exit(1);
    else
        return stack[top--];
}
void sum(){
    int a,b,c;
    a=Pop();
```

```

        b=Pop();
        Push(b+a);
    }
    void diff(){
        int a,b,c;
        a=Pop();
        b=Pop();
        Push(b-a);
    }
    void mult(){
        int a,b,c;
        a=Pop();
        b=Pop();
        Push(b*a);
    }
    void divi(){
        int a,b,c;
        a=Pop();
        b=Pop();
        Push(b/a);
    }
    int main(){
        char exp1[20];
        char *e;
        scanf("%s",exp1);
        e=exp1;
        while(*e!='\0'){
            if(isdigit(*e))
                Push(*e-'0');
            else{
                switch(*e){
                    case '+':sum();break;
                    case '-':diff();break;
                    case '*':mult();break;
                    case '/':divi();break;
                }
            }
            e++;
        }
        printf("%d",stack[top]);
        return 0;
    }

```

Status : Correct

Marks : 10/10

3. Problem Statement

Rithi is building a simple text editor that allows users to type characters, undo their typing, and view the current text. She has implemented this text editor using an array-based stack data structure.

She has to develop a basic text editor with the following features:

Type a Character (Push): Users can type a character and add it to the text editor. Undo Typing (Pop): Users can undo their typing by removing the last character they entered from the editor. View Current Text (Display): Users can view the current text in the editor, which is the sequence of characters in the buffer. Exit: Users can exit the text editor application.

Write a program that simulates this text editor's undo feature using a character stack and implements the push, pop and display operations accordingly.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the character to be pushed onto the stack.

Choice 2: Pop the character from the stack.

Choice 3: Display the characters in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

1. If the choice is 1, print: "Typed character: <character>" where <character> is the character that was pushed to the stack.

2. If the choice is 2, print: "Undo: Removed character <character>" where <character> is the character that was removed from the stack.
3. If the choice is 2, and if the stack is empty without any characters, print "Text editor buffer is empty. Nothing to undo."
4. If the choice is 3, print: "Current text: <character1> <character2> ... <characterN>" where <character1>, <character2>, ... are the characters in the stack, starting from the last pushed character.
5. If the choice is 3, and there are no characters in the stack, print "Text editor buffer is empty."
6. If the choice is 4, exit the program.
7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1 H

1 A

3

4

Output: Typed character: H

Typed character: A

Current text: A H

Answer

```
// You are using GCC
```

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
#define Max 100
```

```
int top=-1;
```

```
char arr[Max];
```

```
void pushed(char data){
```

```
    printf("Typed character: %c\n",data);
```

```
    top=top+1;
```

```
    arr[top]=data;
```

```
}
```

```
void pop(){
```

```
    if(top== -1)
```

```
        printf("Text editor buffer is empty.Nothing to undo.\n");
```

```
    else{
        printf("Undo: Removed character %c\n",arr[top]);
        top-=1;
    }
}
```

```
void display(){
    if(top== -1)
        printf("Text editor buffer is empty.\n");
    else{
        printf("Current text:");
        for(int i=top;i>=0;i--){
            printf(" %c",arr[i]);
        }
        printf("\n");
    }
}
```

```
int main(){
    int choice;
    char data;
    do{
        scanf("%d",&choice);
        switch(choice){
            case 1:
                scanf(" %c",&data);
                pushed(data);
                break;
            case 2:
                pop();
                break;
            case 3:
                display();
                break;
            case 4:
                break;
            default:
                printf("Invalid choice");
                break;
        }
    }while(choice!=4);
    return 0;
}
```
